Summary

As a Senior Data Engineer, Design and deliver large-scale data analytics solutions on **GCP, Azure, AWS, and Databricks**. Experienced in **Big Data, Data Engineering, and Data Analytics**, with a proven track record of tailoring solutions to diverse industry needs. Currently in a hybrid role combining Data Engineering and Data Management Consulting, enabling governmental and private sector organizations to achieve **NDMO** and **NDI** compliance while building **highly optimized, high-quality data platforms**.

Education

Menoufia University, Faculty of Electronic Engineering	1 May 2015 - 1 Jul 2020
Computer Science and Engineering Department	Accumulative Grade: Very Good 79%

Working Experience

- **Data Management Consultant / Engineer | Tools & Solutions** - April 2025 – Present in Riyadh, Saudi Arabia - Full Time
I work in a hybrid role combining data engineering with data management consulting, using tools like Microsoft Fabric and Databricks to build optimized data platforms and help organizations in Saudi Arabia achieve NDMO and NDI compliance.

- Deliver end-to-end **data engineering solutions** leveraging technologies such as **Microsoft Fabric, Databricks**, and cloud platforms (**GCP, Azure, AWS**) to design, build, and optimize large-scale data platforms.
- Act as a **Data Management Consultant**, guiding governmental and private sector organizations in achieving **NDMO** and **NDI** compliance through effective **data governance, data quality management, and metadata management** practices.
- Integrate **data architecture design** with **data governance frameworks** to ensure scalable, secure, and high-performance analytics environments.
- Collaborate with cross-functional teams to implement **ETL/ELT pipelines**, enable **data integration and interoperability**, and establish **monitoring and reporting frameworks** for compliance tracking.
- Provide strategic recommendations for **data maturity improvement**, ensuring alignment with national regulations and best practices.

Key Tools & Technologies: Microsoft Fabric, Databricks, GCP, Azure, AWS, SQL, Python, Data Lakehouse, Power BI, Data Quality tools.

- **Senior Data Engineer | Rabbit Mart**- December 2024 – Present in Cairo, Egypt (Remote) - Part-time
As a Senior Data Engineer at Rabbit Mart, I led the development of scalable data solutions using **Google Cloud Platform (GCP)** tools, including **Composer, PySpark, BigQuery, Datastream, and Terraform**. My contributions resulted in significant cost optimization and enhanced operational efficiency across multiple teams.

- **Designed a multi-country data architecture** to support Egypt, Saudi Arabia, and other regions, ensuring **cost separation, security compliance, and governance** for each market.
- **Developed two Proof of Concepts (PoCs) for cost optimization**, leveraging Google’s best practices such as **partitioning, clustering, and denormalization**. These PoCs demonstrated improved performance and cost savings, providing stakeholders with data-driven insights.
- **Led the development of a data pipeline to extract and process Mixpanel data**, enabling various business use cases. This project ensured seamless **data integration, transformation, and analytics**, empowering stakeholders with actionable insights.
- **Built a Rider Performance Use Case**.

- **Senior Data Engineer | DataScience Middle East** Sep 2023 – Dec 2024 | Dubai, UAE (Remote) | 1 yr 4 months

As a **Senior Data Engineer**, I led the end-to-end execution of data engineering projects, driving the **design and implementation of ETL processes, data migration strategies, and data warehousing solutions**. My work ensured **seamless data integration, optimized data pipelines, and enhanced business intelligence capabilities** to support data-driven **decision-making**.

- Spearheaded **data engineering projects** from requirements gathering to deployment.
- Designed and implemented **data migration strategies**, ensuring smooth transitions.
- Built and maintained **scalable data warehousing solutions** to support analytics and business intelligence.

- **Data Engineer | PwC Middle East** Jan 2023 – Sep 2023 | Cairo, Egypt (Hybrid) | 9 months

As a **Data Engineer** at PwC Middle East, I played a key role in developing and presenting proof of concepts (**PoCs**) and demos for clients across regions, including the UK and Germany. I leveraged cutting-edge technologies like Microsoft Fabric to drive innovation and enhance data engineering capabilities. My work involved close collaboration with cross-functional teams to implement data solutions that improved data processing efficiency and client satisfaction.

- Developed and presented **PoCs** and demos showcasing innovative data solutions.
- Explored and implemented emerging technologies, including Microsoft Fabric.
- Collaborated with cross-functional teams to enhance data engineering solutions.

- **Data Engineer | _VOIS (Vodafone)** Sep 2021 – Jan 2023 | Cairo, Egypt | 1 year 5 months

As a **Data Engineer** at **_VOIS**, I was part of an Agile team of **15 professionals** from diverse **nationalities**, delivering over **60 Jira tickets per month**. My responsibilities included developing new data pipelines, implementing transformations, backfilling missed data, and building automated alert systems to ensure data quality and pipeline reliability. Our team managed a 50-100 TB Data Warehouse across 10+ European markets using Google Cloud Services and Composer.

- Designed and implemented solutions for analytics projects based on business requirements.
- Developed ETL pipelines to transform raw data into structured, usable information for analytics.
- Automated repetitive tasks, including monitoring, alerts, and daily pipeline health checks.
- Integrated data from multiple sources, such as MongoDB and Google Analytics streaming data, into Data Lake.
- Architected data warehousing solutions using Google BigQuery, optimizing storage and query performance.
- Collaborated with business stakeholders and data analysts, providing expertise in data engineering.

Projects

- **MISA (Ministry of Investment, Saudi Arabia)**

Led a data migration initiative to integrate data from multiple sources, construct a relational database, and develop ETL processes to transform and load data efficiently. Designed and implemented a data mart to support business intelligence and reporting.

Key Responsibilities:

- **Requirement Gathering:** Collaborated with business stakeholders to understand data needs, reporting requirements, and operational constraints.
- **Architecture Design:** Designed a high-level architecture for data ingestion, storage, and transformation, ensuring scalability and performance.
- **ETL Development:** Designed and developed ETL pipelines to extract, transform, and load data from various sources into a centralized relational database.
- **Deployment & Optimization:** Deployed ETL processes in the production environment, ensuring data integrity and optimal performance.
- **Testing & Quality Assurance:** Built and executed test case scenarios to validate data accuracy, consistency, and compliance.
- **Stakeholder Engagement:** Conducted customer reviews, gathered feedback, and iterated solutions to align with business objectives.

- **Data Engineering on Google Cloud Platform:**

● **Creation and maintenance pipelines on Google Cloud Platform:**

As a squad, we Serve more than 7 services in European Markets like Secure-Net, Giga-Hub, our steps to load serialization files like parquet, Avro, JSON and deserialize them and making needed transformations using PySpark job on Dataproc clusters with providing operators through Google cloud Composer (Airflow) after making unit test, push changes on a repository for each service.

- Ingest data from different sources (Mongo DB, Pub-Sub, etc)
- Using PySpark and Airflow to transform the data into useful information.
- Building Alerts system for errors.
- Engage with business stakeholders, collaborate with data analysts, and provide data engineering expertise, as from design models to customer experience.
- Architect Data warehousing uses Google BigQuery for more than 7 services in European Markets like Secure-Net, Giga-Hub.
- Migrate and Revamp all DAGs for all environments from Airflow v1 to Airflow v2 using Composer 2 to keep up to date and get benefits of the new features.

● **Automating Backfilling Data into BigQuery**

I wrote a python script to automate the data backfilling process into BigQuery using dynamic DAGs in Airflow, so the task took 5 hours instead of 2 weeks.

- **Engineering on Azure Platform:**

● **Covid-19 trends and predictions of the spread of the virus:**

Implementing a Data engineering solution for a real-world problem of reporting Covid-19 trends and prediction of the spread of the virus using Azure Data Factory, SQL, Data Lake, Databricks, HDInsight and CI/CD.

- Ingesting the data from ECDC COVID-19 data (HTTP Connector) and Population Data By age (Azure Blob Storage) using Azure data factory
- Transforming the data using Dataflow, Databricks, and HDInsight inside the Azure data factory activity
- loading the data into Data Lake Gen2 and Azure SQL DB
- Build production ready pipelines using the parent pipeline and Tumbling trigger.
- Monitoring the solution using Azure Data Factory monitoring capabilities and Azure monitoring service
- Build CI/CD for the Azure Data Factory using Azure DevOps

● **Microsoft Fabric**

Demo With PwC:

We used Wide World Importers (WWI) Dataset which is a wholesale novelty goods importer and distributor operating from the San Francisco Bay area.

- Ingested the data from Azure Data storage account in Parquet file format using Data Factory into Files Section in the Lakehouse.
- Prepared and transformed the data using PySpark and Build Dimensional model than build Power BI reports on top of it.

Data Platform for Leejam Company:

Enhanced the performance of Microsoft Fabric data platform at Leejam by reviewing the current infrastructure and processes and implementing technical solutions to accelerate data extraction and processing through strategies such as Partitioning and Parallel Processing. Developed an automated alerting system to monitor ETL failures and delivered a Solution Architecture design aligned with the company's future objectives.

- **Graduation Project:**

Qamous is an offline mobile application that works as a dictionary to translate from sign language to natural language (Arabic, English) and vice versa to remove the border between ordinary and deaf people.

Documentation: [Qamous](#)

What I have accomplished in the project includes:

- Worked on designing, implementing, and using deep learning technology to solve communication problems with deaf people.
- Build a deep learning model to classify images into sign language letters and numbers.
- Converted both models into a lite model to work on android and web apps.

Courses and Certificates

- Databricks Data Engineer Associate
- Azure Data Engineer Associate (203)
- Azure Data Fundamentals
- Alteryx Designer core certified
- Celonis EMS Technical Expert.
- **Data Engineer with Python (CAREER TRACK) on data camp:** From 11/2021 to 3/2020

In this track, I discovered how to build effective data architecture, streamline data processing, and maintain large-scale data systems.

- In addition to working with Python, I also grew my language skills as I worked with Shell, SQL, and Scala, to create data engineering pipelines, automate common file system tasks, and build a high-performance database.
- Through hands-on exercises, I added cloud and big data tools such as AWS Boto, PySpark, Spark SQL, and MongoDB, to My data engineering toolkit to help me create and query databases, wrangle data, and configure schedules to run my pipelines.
- Certificate: [Data Engineer with Python](#)
- **Main courses:**
Data Engineering Concepts-Python (basics - OOP - Unit Testing - writing efficient code in python)-Big Data With PySpark-Data collection and Ingestion-Linux-Scala-Airflow in Python-NoSQL Database

- Google Cloud Data Engineer (BigQuery, Composer, Dataproc, Data Fusion, GCS, etc.)
- AWS services using Boto3 (S3, SNS, Kinesis, Redshift, EMR, Lake Formation, etc.)
- Machine learning
- Deep Learning
